
Slideshow :: showItem

Posted by Anthony - 2009/11/25 09:25

Hello,

I have a problem with the slideshow Camp26. I would like to click a picture to change the visible image in the slideshow.

I try to include it in the file jquery.galleryview-1.1.js:

```
$(img.show1).click(showItem(0));
```

Cette ligne se trouve juste après cela :

```
$('#img.nav-prev').click(showPrevItem);  
$('#img.nav-next').click(showNextItem);
```

But this is buger the slideshow because it comes without stopping on my image 0.

Have you any idea?

Sorry for my English, I'm French ...
