
Ajax RSS Feed - Display problem in IE6/7

Posted by Frank - 2009/12/10 07:10

Hi there,

I have this module in slides module and when one of the other slides are open and the slide with the RSS feed is hidden from view the feed text appears, overlaying the content of the other tabs. This only happens when every second set of feed details scrolls in to view.

Hard to explain clearly but can be viewed on the homepage, right side, at www.maryupton.ie to see it first hand.

Any suggestions at all on how to overcome this would be most appreciated as otherwise the best extension of its kind available.

Thanks,

FRANK
