
Kwick Sliding Menu - Sliding not working

Posted by Claes Lund - 2010/01/18 04:27

Hello

I am trying to use the Kwick Sliding Menu For Joomla 1.5, but it only slides half the time.

My problem is the following:

With mootools "off";

When my page is showing something that is not a component the sliding works fine.

But when showing a page from a component the sliding does not work.

The links still works.

With mootools "on";

The problem is now the other way around. When showing a page that is not a component the sliding does not work.

But when showing a component the sliding works fine.

I have tried using solutions poste here

<http://forum.joomla.org/viewtopic.php?f=304&t=194274>

<http://forum.joomla.org/viewtopic.php?f=231&t=283215>

But without any luck.

Also i have looked at http://docs.jquery.com/Using_jQuery_with_Other_Libraries

but that have not helped. Does anybody have any ideas about what i causing the problem, and how to solve it??

/Claes
