
Kwick Sliding 1.5 doesn't work well under Safari

Posted by Robert - 2010/01/30 08:11

Hi,
I have problem with the menu when I use safari browser on Mac. When I open a page with the module on it, everything is displayed correctly. But after I try to use it (slide any button) and stop using it the menu slide back but the width of the module is different (shorter). And it remains shorter until I refresh the page.

link to the website: <http://labo3.lu/presentation.html>

Any ideas how to solve the problem? Thank you in advance for any suggestions.

try change the 'includes mootools' option in the module administrator

maybe there's conflict with module's mootools file and your safari browser
