## kwickverti sliding menu vertical + sh404sef

Posted by cily - 2008/09/12 11:47

---

when i have install sh404sef for seo service the module (sliding menu vertical) stopped to wotk correctly: infact only in homepage and little more page i can see the immagine... in the rest of site the module keep a blank immagine but it is uppaded...

sorry for bad english

this is the site

Hello cily,

I have seen your site and I think you have fixed your trouble by yourself. Congratulations for you :)

Regards,

Denny S.P.

Hi, I have the same problem. When I activate the modul, the menu is shown at the main page withot problems, perfekt. If I follow a link and go to another page, there are the links, but no images. What can I do that it is shown at all pages?

are sure the module is already assigned to all pages of your site?

go to your module manager, click the module and see its Menu Assignment.

you should chose All if you want to the module appears in all pages

I have the same problem using Joomla 1.5.

Module is assigned to all pages, but if I activare Friendly URL in SEO configuration, Kwick vertical menu appears in home page only, in other pages is present but invisible.

Good news for ya all, kwickverti sliding menu module!

the bug when SEF is activated is gone now
